Great Apes

Most apes are endangered because humans have destroyed their habitats or have hunted them. Steps are being taken with the aim to help save these creatures. Save our great apes!

(ay a-e a ey ea)

Did you know that you are an ape? Humans belong to the ape family. But, first, what is an ape and what makes these mammals so great?

Apes make nests out of leaves to sleep in. Apes always like to make their beds each night. Apes live a long life. They are the longest living mammal. Some can live over fifty years.

Apes can be great parents, both male and female. Their babies stay with them for a long time. Baby orangutans will stay with their mother until they are six or seven years old.

Apes are large, intelligent and playful animals. The great apes live in Africa and Asia. The ape family includes orangutans, gibbons, bonobos, gorillas and chimpanzees.

What do apes eat? Apes are omnivores. They enjoy eating fruits and plants. Sometimes they snack on insects.

Unlike monkeys, apes do not have tails. Their arms are longer than their legs. They love to glide and sail through the trees.
