We Need Bees

How can we help bees? Start in your own garden. Attract bees by planting bee-friendly flowers and plants that they can pollinate. Now we know just how much we need bees. Let's make sure we look after these cute, buzzy insects.

(e-e ey e y ie ea)

Bees are happy, fuzzy and they love to flap their wings on a sunny day! But, they are important little creatures. There are more to bees than meets the eye!

Without bees moving around fields between flowers, plants will not be able to grow and reproduce. People rely on many plants for food that bees pollinate for us. If bees become extinct, it could destroy the Earth's special balance in the environment and our food supplies around the world might disappear.

Next, the **bee** flies to another flower, and it brings the pollen with it. Some of this pollen falls onto the next flower that the **bee** lands on. This pollinates the flower, and so on.

You might fear bees and not want to get a **bee** sting. But, bees are an important part of our world. We need bees. But, why?

Without bees, we might not have the plants, flowers, fruits and vegetables that we need to survive.

Bees pollinate all kinds of flowers. The bees fly from flower to flower and gather nectar. When a bee lands on a flower, some of the pollen sticks to the bee.
