“Pip, what are you working on?” said Ted.
“It’s science fair next month. I’m thinking about topics for my entry,” said Pip. “We need to list a few topic ideas by the end of today,” she said.

“Do you need a science buddy?” asked Ted.
“Yes, are you interested? Do you have any exciting and new ideas?” said Pip. “I can suggest a few,” said Ted.

Pip got out her notepad and started scribbling down some ideas. “Name the categories that you are keen on exploring,” she said. “I think the greatest categories are 3D printing, astronomy, animal biology, and food technology,” said Ted.

Scientists

“A good place to start. How about we design and 3D print a monster or a robot?” said Pip. “Or we could design x-ray vision so that we can see into space,” said Ted.

“How about some ideas for animal biology?” said Pip. “I have a pet cat and a pet dog. We could try to discover why cats purr? Or understand why cats and dogs dislike each other?” said Ted.

Pip and Ted kept brainstorming. “This idea might be the best. We could discover how to make the tastiest marshmallows. This would fit into the food technology category,” said Pip.

The Funniest Scientists

“One more idea. How about calculating how salty is the sea?” said Ted. Pip giggled. “Is that food technology or ocean science?” said Pip. “Let’s put it down for both,” said Ted. “Job done. This science project might not win a prize but it sure will be the funniest,” said Pip.
