

A Haul of Honey

Do you like honey? Where do we get honey from? Who collects the honey that we like to eat so much? Bees make the honey. Beekeepers collect the honey.

A Haul of Honey

Bees like to flap their wings on a sunny day! But, bees are important little insects. Here are a few facts about bees and honey.

A Haul of Honey

Bees make the honey. They pollinate flowers and gather nectar. When a bee lands on a flower, some of this pollen sticks to the bee. Next, the bee flies to another flower. It brings the pollen with it. Some of this pollen drops onto the next flower. This pollinates the flower, and so on.

A Haul of Honey

The nectar that the bee sucks up turns into a sugar mix. The bee flies back to the beehive and delivers the honey mix.

A Haul of Honey

In the hive, the bees fan their honey mix with their wings. The honey mix gets thicker and turns into honey.

Next, it is the beekeeper's job to collect the honey from the honey boxes (or hives). Here, the beekeepers are checking and collecting the honey from the boxes and trays.

A Haul of Honey

Look at this. It looks like a good haul of honey. The beekeeper has collected a lot of honey and some beeswax too.
