I protect your brain. What am I? I am the skull. How did you do? Can you name the other bones in your body?

Name the Bone

7

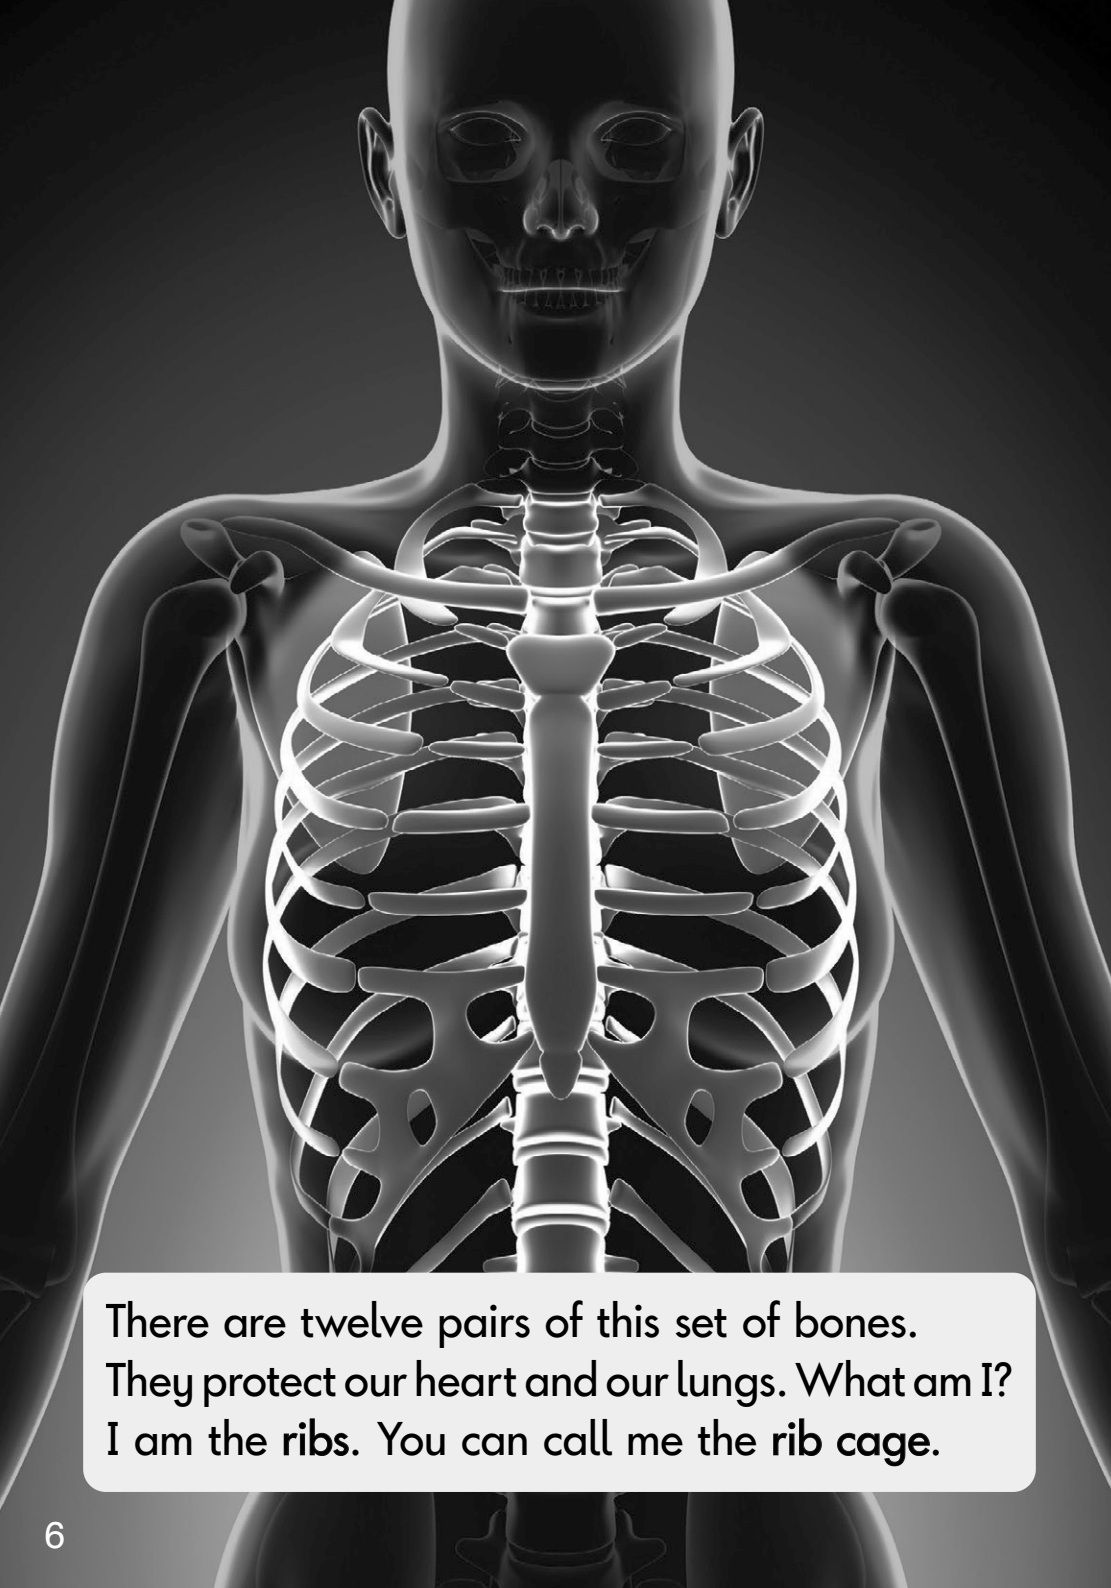

o-e u-e (/oo/ and /y-oo/)

We each have a skeleton made up of many bones. Bones give our bodies their structure and their shape. We have over two hundred bones in our bodies!

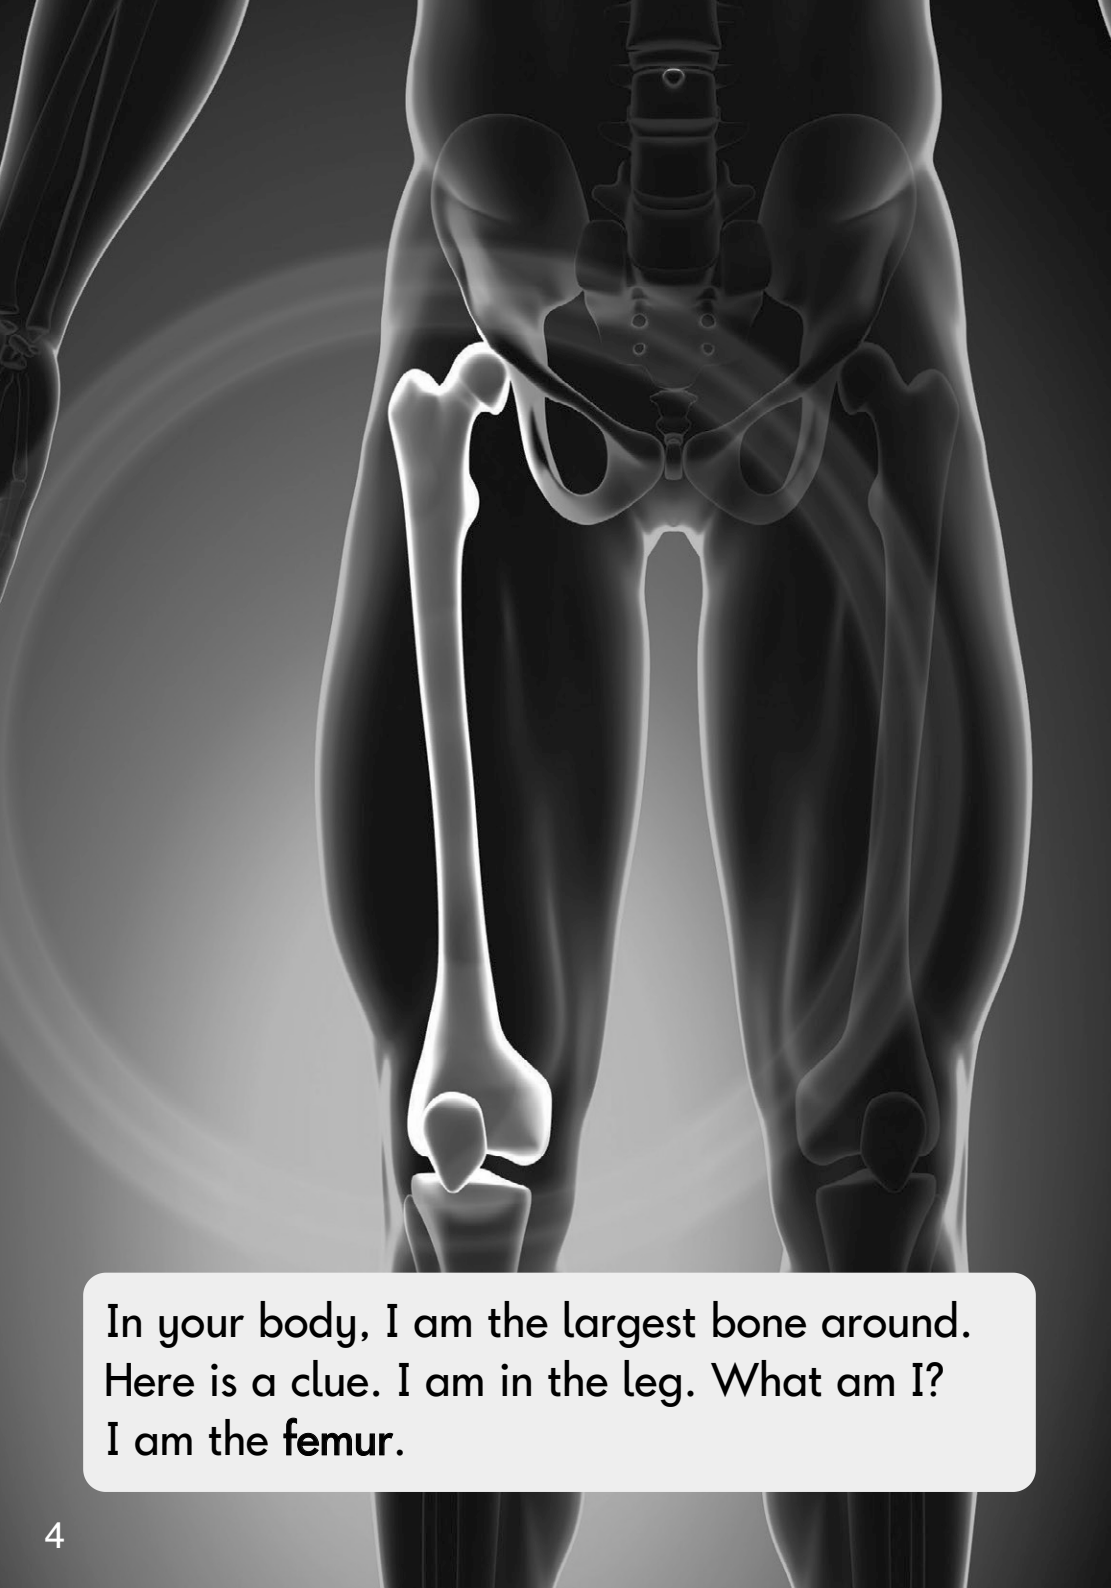

This bone is huge and it protects your kidneys. The bones in your legs are connected to this bone. What am I? I am the **pelvis**.

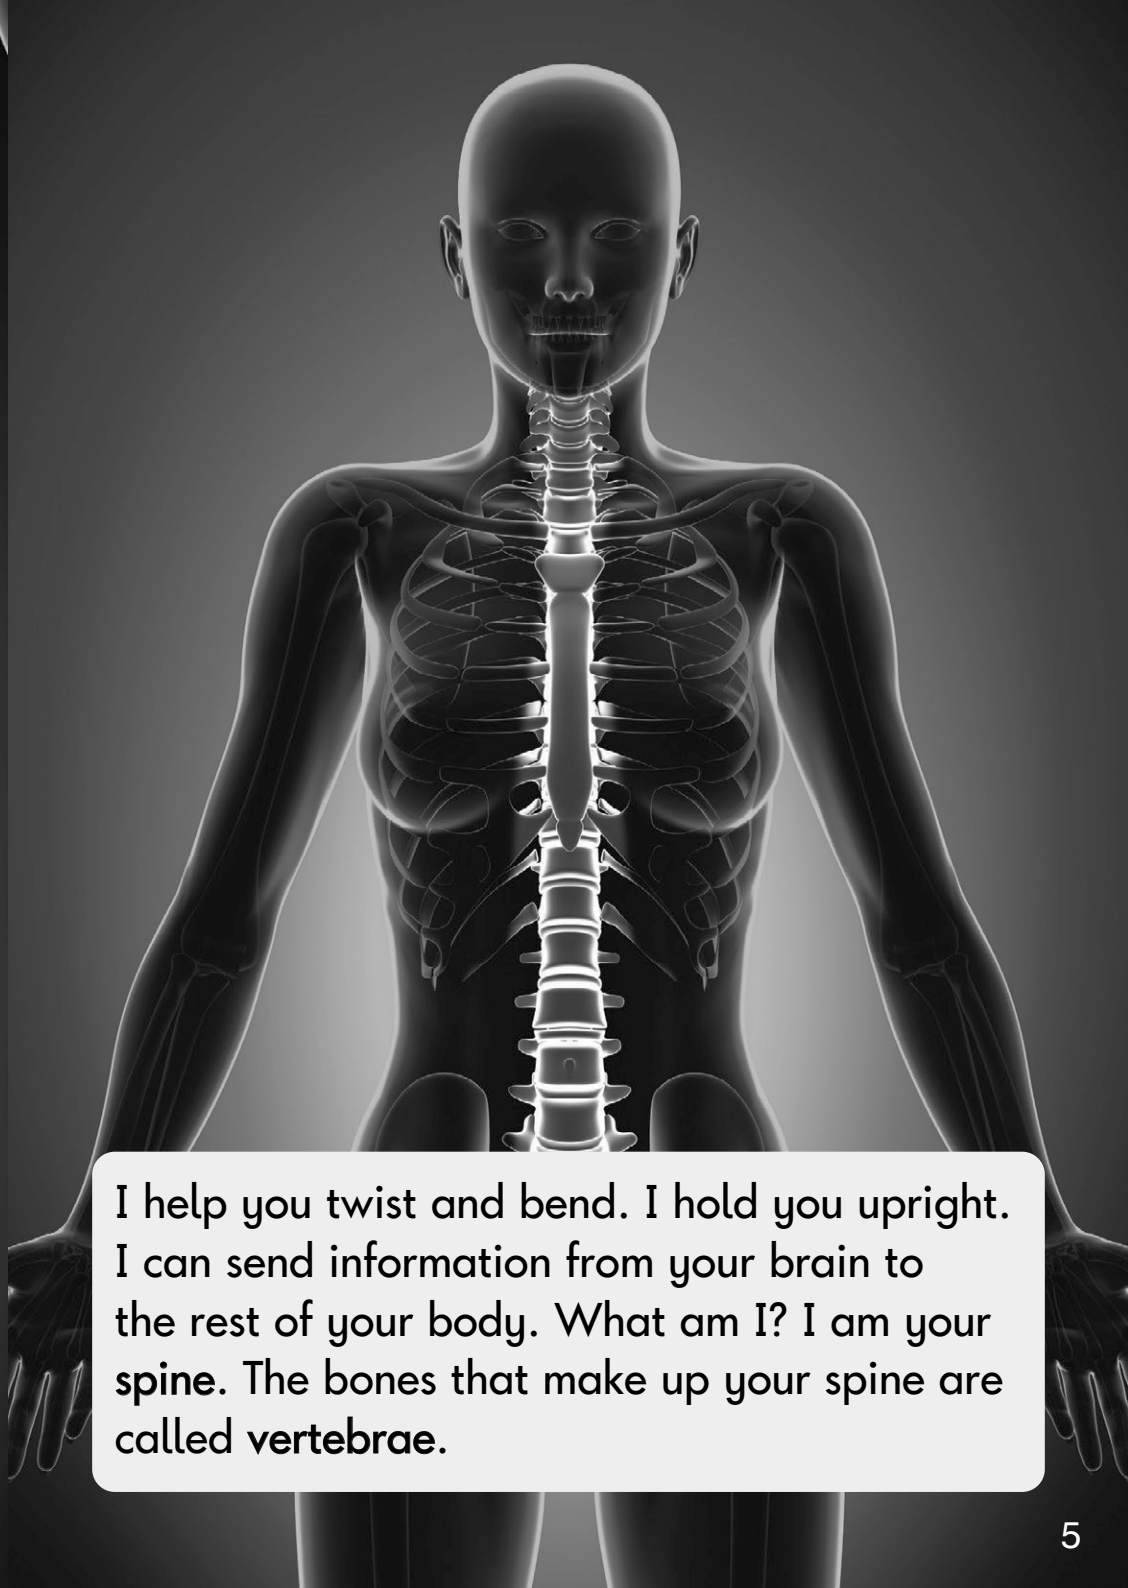

There are twelve pairs of this set of bones. They protect our heart and our lungs. What am I? I am the ribs. You can call me the rib cage.

Without our bones we cannot move. Bones protect our organs and our bodily systems. Our bones grow and change all the time. Now, it's time to look at your bones. Which bone am I? Read on and see if you can name that bone.

In your body, I am the largest bone around. Here is a clue. I am in the leg. What am I? I am the **femur**.

I help you twist and bend. I hold you upright. I can send information from your brain to the rest of your body. What am I? I am your **spine**. The bones that make up your spine are called **vertebrae**.
