

Your Brain, Your Supercomputer

How much do you know about your brain?
The human brain acts like a supercomputer.
The brain sends signals to all parts of your body.
Read on to learn some more interesting facts
about your brain.

Your Brain, Your
Supercomputer

The brain is an organ that sits inside our skull.
It is protected by fluid inside the skull.

Your Brain, Your
Supercomputer

Our brain controls everything that our body does.
Our brain takes the lead role in how we think,
feel, learn and move. Every minute of every day,
it tells our body what it needs to do.

Your Brain, Your
Supercomputer

Think about when you hear something, see
something, taste something or smell something.
This is our brain sending us signals out of
microscopic cells from all over our bodies.

Your Brain, Your
Supercomputer

Our brain contains billions of cells called
neurons. Chemical and electrical signals race
between the neurons. Messages are sent along
neuron pathways.

Your Brain, Your
Supercomputer

Your Brain, Your Supercomputer

The brain keeps on working when we sleep.
It controls our dreams and our memories.

Your Brain, Your
Supercomputer

The brain will keep growing until we are around
20 years old. It keeps making connections
throughout our lives. We can continue to learn
new things because of our supercomputer brain.
