Teachers / Parents

These decodable readers have been written using a strictly controlled vocabulary. Text uses only **decodable regular words** (according to the week by week progression of Rainbow Phonics) along with '**Heart Words**'. Heart Words (common exception words) are frequently used words that are not decodable at this phase.

Phase Five - Non-Fiction (Life Science)

1. The Deep Sea
2. Birds and Beaks
3. Paws and Claws
4. What is an Elephant?
5. A Haul of Honey
6. Soil is Alive!
7. Name the Bone
8. Your Brain, Your Supercomputer
9. Apex Predators
10. Extreme Environments
11. Reptiles, Hot or Cold?
12. Seeds on the Move

Extreme Environments

Scientists want to know why and how living organisms have adapted to extreme habitats. In extreme environments, we can discover new plant and animal species. We can also understand Earth's history, and issues like climate change through exploring extreme environments.

Review

Extreme environments can be found all over planet Earth. An extreme environment is a place where it is difficult or impossible for humans to survive. But, there are some living things that can survive in such extreme places.

Why do people want to go to these extreme environments? Humans like to explore new frontiers. Ancient peoples explored harsh environments to find new places to live. People can explore to learn about the world.

Another example of an extreme environment is a desert. Deserts are dry, and they can be hot and cold. Some deserts are sandy and some deserts are rocky. With little water in deserts, animals and people have had to adapt.

Extreme environments might have very high temperatures or pressure, or be very acidic or alkaline, or extremely cold. An extreme environment can include polar continents, deserts, deep oceans, geothermal and volcanic vents, and even outer space.

Let's look at some examples of extreme environments. The Arctic and the Antarctic are the two polar regions on Earth. The Arctic is home to arctic foxes, wolves, seals, whales and polar bears. These animals have adapted to the cold here.

Antarctica is the coldest and windiest place on Earth. It is mostly covered in ice. Penguins can survive on the coast, and microscopic animals and insects live on the land. Seals, whales and dolphins live in the sea around the Antarctic. In Antarctica, people use technology to live in scientific research stations.
