-er	-est	un-

-er Suffixes

er	Drop	Nothing
dishwasher	larger *	dishwasher
larger	* Drop e and add er	cleaner
cleaner		stronger
stronger		

Teachers / Parents

These readers have been written with rich vocabulary including embedded words that contain suffixes. Discuss the use of suffixes for changing the meaning of words and the spelling rules applied. The text consolidates earlier taught phonics skills and heart words.

Phase Six - Non-Fiction (Discoveries & Inventions)

1. The Power of X-Rays
2. The History of Vaccines
3. Inventing the Telephone
4. Inventing the Lightbulb
5. Marie Curie
6. Devoted to the Soil
7. Stem Cell Research
8. Josephine's Dishwasher
9. The Wheel
10. Discovering Genetics
11. The Computer Programmer
12. Central Heating Systems

Josephine's Dishwasher

In 1949, the Garis-Cochran Dish-Washing company became part of KitchenAid®, and the first KitchenAid® dishwasher based on Cochran's design was manufactured. Today, dishwashers are a standard household appliance for many households around the world.

Josephine Garis Cochran was a female American inventor and entrepreneur who created the world's first successful hand-powered dishwasher. She was born in 1839.

At the time of invention, the machine's larger size was not suited to most homes. But by the 1950s, there was more hot water in homes, and stronger dishwashing detergent.

Her new machine was shown in the World Columbian Exposition of 1893. Hotels and restaurants were quick to show interest in her machine. She won a prize for her new machine here.

Josephine set out to design a washing device, after discovering that her plates and saucers were often chipped from handwashing. She might have enjoyed entertaining with dinner parties, but she did not enjoy the washing up. She found a way to automate this household chore, hands-free.

J. G. COCHRAN.

DISH WASHING MACHINE.

No. 355,139.

Patented Dec. 28, 1886.

To solve her problem, she designed and invented a washing up machine. She designed and built her dishwasher and her first patent was issued in 1886. After this, she formed the Garis-Cochran Dish-Washing company so that she could manufacture it.

Cochran's design used gears, pistons, pipes and a rack with a motor that applied water pressure. Cochran designed a set of wire compartments, which fitted plates, cups and saucers. Hot soapy water could be pumped in from a copper boiler to make dishes cleaner.
